

Berlin is very well connected nationally and internationally by rail and air. The launch of the Berlin–Munich high-speed railway line signified the completion of a key infrastructure project for rail transport. Every year, around one billion passengers use services operated by the Berliner Verkehrsbetriebe (BVG – Berlin’s public transport operator) and 417 million passengers use the S-Bahn. Passenger numbers have been increasing steadily for years. Berlin reacted to this increase by expanding services and implementing infrastructure measures.
